Why crowdsource?

It works.....

Why crowdsource?

.... for stars, old boats and newspapers.....

Why crowdsource?

.... can it work for biodiversity data??????

Moths Expedition Australian Museum

[Hawk moths](#) fly very fast and strong, with rapid wingbeats, and can hover in flight to sip nectar. Don't let their beauty fool you though, the caterpillar stage of their life cycle can do significant damage to agricultural crops. Your task is to transcribe the labels so we know who collected them, when and where.

Welcome to the Australian Museum Hawk Moth Expedition

Join the Hawk Moth Transcription Expedition Team and help us capture information from Hawk Moth specimens up to 100 years old. You will be helping us unlock information that has been hidden away in the Museum's insect collection but now will be available worldwide through websites like the [Atlas of Living Australia](#). Watch the video tutorials: [Introduction](#), [Using the Missing Tool & Transcriptions](#).

Bug Fixed (28-09-2011)

Hi all,

The bug that lead to a Scott Sisters test page when asking to transcribe another label has been fixed. Apologies for that, please try again if you stopped because that was frustrating.

Cheers

Paul

Note: Cicada tests are on (7/10/11)

-------------------	----------------------	-----------------	----------------------

The big questions!

1. Is the quality of the transcribed data sufficient to justify the use of crowd-sourcing?
2. Is the crowd-sourcing resource an ongoing one or a fad that will quickly pass and not realize the benefits we hoped it would.

Other Issues to be considered?

1. Transcription versus georeferencing
2. Ease of georeferencing versus accuracy and reliability
3. The challenge of data repatriation
4. Attracting volunteers and maintaining their interest

The transcription effort?

Transcription Effort

How to attract and retain volunteers?

Our experience suggests that in developing projects that seek to use crowd-sourcing we need to ensure:

1. we provide incentives for volunteers to be involved, such as:
 - a. an attractive and easy to use transcription interface
 - b. clear annunciation of the benefits to the institutions
 - c. recognition of the efforts of the volunteers

2. that the digitisation outcome and products are not solely reliant on crowd-sourcing but are supplemented by it.

Is it worth the effort?

When considering it simply as label digitisation for entomological specimens - Maybe

For field note transcriptions – yet to be determined

If you consider it as an exercise in

- Outreach
- Education
- Collections Access

.....then the case is stronger but the jury is still out

Thank you
