About the Atlas

The Atlas of Living Australia is an initiative to improve access to essential information on Australia's biodiversity by providing tools for researchers and others to access, combine and map data on Australian species. The Atlas project is a partnership between the Commonwealth Scientific and Industrial Research Organisation (CSIRO), the Australian natural history collections community and the Australian Government. National Herbarium of New South Wales

The Royal Botanic Gardens & Domain Trust

Acronym: NSW [LSID](#)

[Overview](#) [Records & Statistics](#)

Description

The collection of the National Herbarium of New South Wales consists of around 1.2 million plant specimens. The majority are from within Australia. It is the largest collection in the world of the plants of New South Wales. The collection consists of plant specimens gathered by staff, as well as specimens from donations and exchange with other herbaria in Australia and overseas.

The collection is used for research, reference and documenting the flora of Australia, especially New South Wales flora.

The fungi from NSW has been transferred to the New South Wales Plant Pathology Herbarium (DAR).

The Australian and international wood collection from the former State Forests of New South Wales Herbarium (NSWF) have been transferred to NSW.

Statistics taken (September 2010) from:

<http://www.chah.gov.au/chah/resources/herbaria/nsw.html> [↗](#) (CHAH Last updated: Sep 2006)

The collection was established in 1896 and continues to the present.

Taxonomic range

Flowering plants, conifers, cycads, ferns, bryophytes, lichens, macroalgae.

Kingdoms covered include: Plantae.

Geographic range

Worldwide, with emphasis on Australia, especially New South Wales.

Australian states covered include: New South Wales.

Number of specimens in the collection

The estimated number of specimens in the National Herbarium of New South Wales is 1,198,515.

Of these 630,000 are databased. This represents 52.6 % of the collection.

Click the Records & Statistics tab to access those database records that are available through the atlas.

Sub-collections

The National Herbarium of New South Wales contains these significant collections:

- Historical Collections - R.T. Baker, J. Banks & D. Solander, W. Bäuerlen, E. Betche, W.F. Blakely, J.L. Boorman, E.F. Constable, A.D.E. Elmer, W.V. Fitzgerald, C. King, A.H.S. Lucas, J.H. Maiden, E.D. Merrill, G.I. Playfair, F.A. Rodway, F.R.R. , H.M.R.Rupp, Schlechter, J.W. Vickery, W.W. Watts, T. Whitelegge.

Sightings, photos and data for the
Black Fig

Description

The genus *Ficus* consists of about 800 species distributed throughout India, parts of Asia, the Pacific islands and Australia. There are about 40 Australian species most of which are found in tropical areas.

Ficus macrophylla is a medium to large, spreading tree 15 to 35 metres high with a similar spread. ...

SOURCE: [Australian Native Plants Society \(Australia\)](#) 

The Moreton Bay Fig is an evergreen tree that can reach heights of 60 m (200 ft). The trunk can be massive, with thick, prominent buttressing, and reach a diameter of 2.4 m (8 ft). The rough bark is grey-brown, and marked with various blemishes. It is monoecious : each tree bears functional male and female flowers. ...
