## Whole-drawer imaging for management & curation of the ANIC

**Beth Mantle, N. Fisher & J. La Salle**  
**Australian National Insect Collection**  
**CSIRO Ecosystem Sciences**

# The taxonomic impediment

*“Existing taxonomic processes have served us well for centuries but are clearly inadequate for the challenge at hand. The taxonomic community must rally around a common vision...  
... It is time to approach taxonomy as a large-scale international science.”*

Quentin Wheeler, Peter Raven & Edward O. Wilson  
Science, 2004.

# Current rate of digitisation at the ANIC

# The SatScan™ by SmartDrive Ltd

CSIRO. An assessment of the SatScan(TM) whole-drawer imaging system.

# Using SatScan™

<http://www.youtube.com/watch?v=ogpiqzDqa4A>

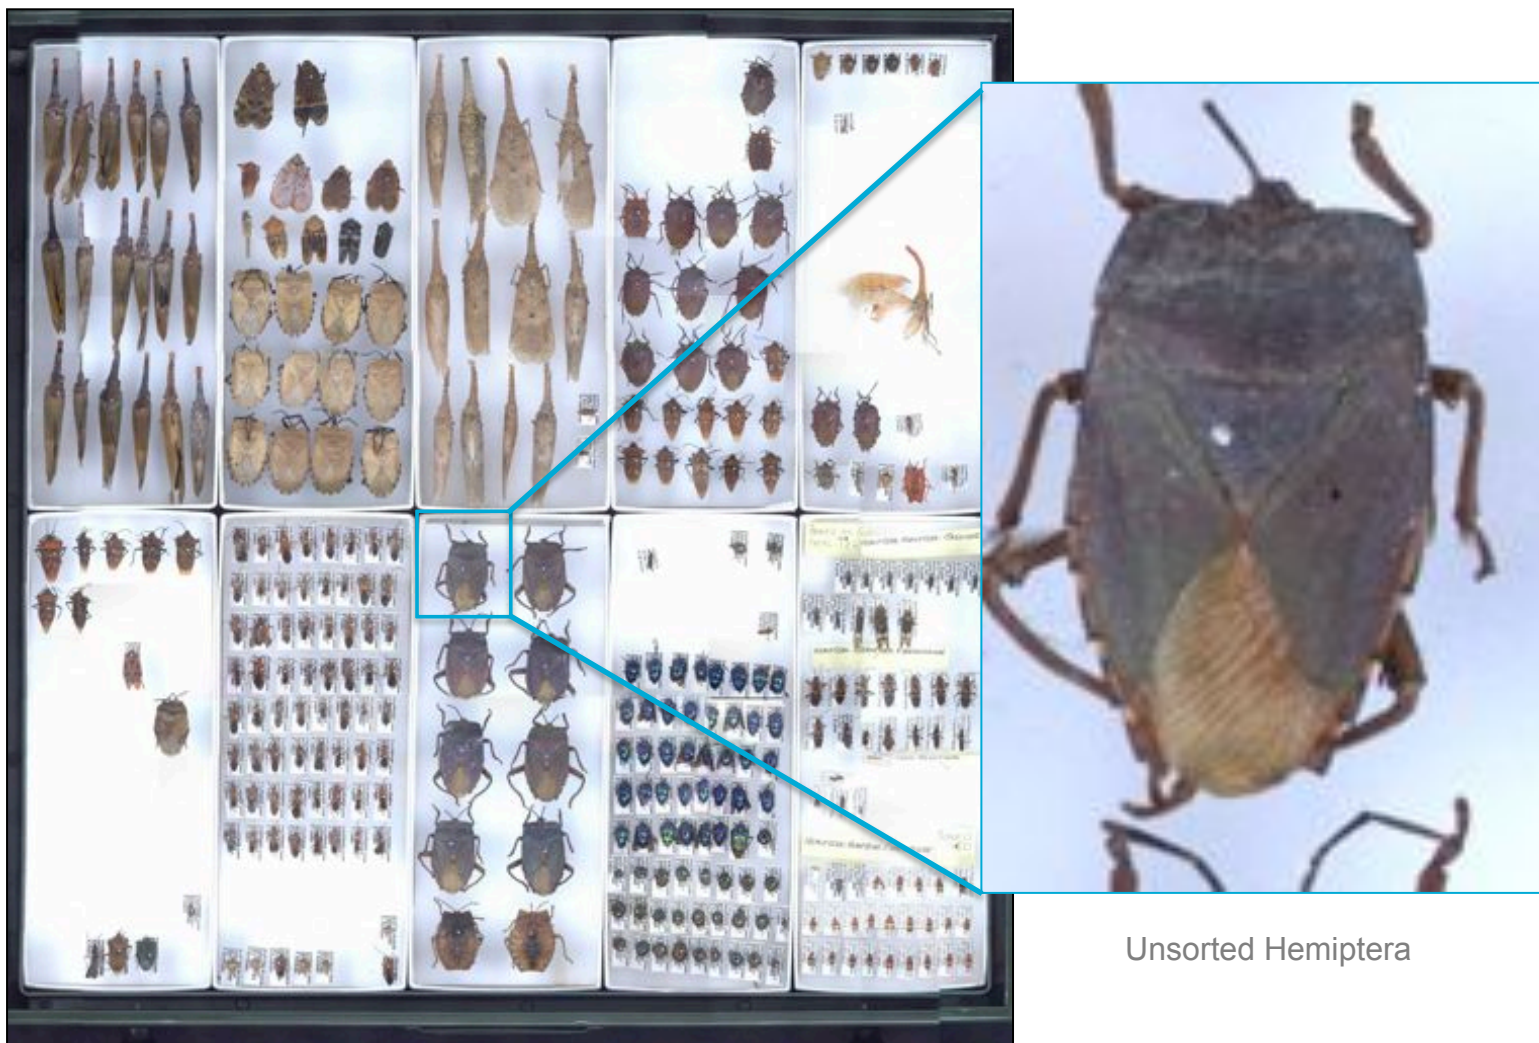

# Examples – Large specimens

Podocanthus sp. (Tropidoderinae)

# Examples – Unsorted material

Unsorted Hemiptera

# Example – Curated drawer

Milionia sp. (Geometridae)

# SatScan™ specifications

- Basler A631FC ½” CCD Camera.
- Edmund Optics 0.16X telecentric lens.
- Field of view = 35.5 x 27.7 mm.
- Original image capture resolution = 1280 x 960.
- Final image resolution = 36 pixels mm<sup>-1</sup>.
- Depth of Field = 6 to 80mm.
- Output file format = 24 bit BMP or LZW-compressed TIFF.
- File size = ~780MB (BMP) and ~340MB (TIFF).
- Exposure time = 1 to 2000 ms.
- Scanning time (50 x 50 cm) = 5 to 7 mins depending on exposure.
- Stitching time (200 – 400 tiles) = 6 to 9 minutes.

# Aperture and Depth of Field

| Aperture          | Exposure (ms) | DoF (mm) | Smallest resolvable structure ( $\mu\text{m}$ ) |
|-------------------|---------------|----------|---|
| Completely open   | 11            | 6        | 56  |
| Midway            | 41            | 17       | 59  |
| Completely closed | 810           | 80       | 98  |

# Applications in the ANIC

- **Research:**
  - High through-put imaging for automatic character recognition systems. (MacLeod et al. 2010)
  - Morphometric specimen analysis.
  - Colour and pattern analysis.
  - Population biology.
  - Identifications (“virtual curation”).
- **Collection Management:**
  - Auditing & security.
  - Collection valuations and assessments.
  - Remote access to collection.
  - Facilitating image and loan requests.
  - Identifications (by both specialists and citizen science initiatives).
  - Type and label checking.
- **Public Engagement.**

# Unexpected discoveries...

# Morphometrics research...

CSIRO. An assessment of the SatScan(TM) whole-drawer imaging system.

“Did anyone know about this...?”

CSIRO. An assessment of the SatScan(TM) whole-drawer imaging system.

# Logistics

- Best suited to drawers with similar-sized, uniformly positioned specimens.
- Excellent results with larger specimens (e.g. beetles):
  - Can generally identify to species.
- Very small specimens present challenges:
  - However, label information is visible (barcodes?).
- ANIC = 25,000 entomological drawers.
  - Imaging 40 drawers per day is reasonable (batch stitching overnight).
  - Whole collection could be imaged in 624 days (2.5 working years) with one system.

# Challenges

- **Development of workflow:**
  - Drawer image is out-of-date immediately after capture.
  - Maintain list of drawers that have 'changed' due to sorting, curation, changes to agreed taxonomy etc.
- **Metadata capture and handling:**
  - Linking images with specimens: Morphbank, LSIDs?
  - Interacting with & annotating image metadata.
  - Integration with collection management system.
  - Image storage (25,000 drawers = 12TB).
- **System limitations:**
  - Scanning area ~ 500 x 600 mm.
  - Errors during batch stitching.
  - Focusing is time consuming and clumsy.

# Future Plans

- Develop and implement imaging workflow.
- Australian Morphbank ([www.morphbank.net](http://www.morphbank.net)) as image repository.
- Integration with collection management system.
- Barcodes on unit trays & drawers to link images with metadata.
- Incorporation of specimen-level identifiers on images.

Image Record: [464664] *Neodialineura ataxia*
